Rock Pooling

We always go rock pooling when we're in Cornwall. We take a bucket, nets and spades.

It is better to do it when the tide is out. We look ~~and~~ under rocks to find creatures

We hardly ^{ever} find anything but this week we found a little fish which we identified as a sardine.

Fact File of Sardines

Sardines is a name of several kinds of fish, especially oily fish.

History

Sardine fishing was a thriving industry in Cornwall from 1750-1880.

& Food

Sardines are usually sold as food packed tightly in tins

Coastal Erosion

When we were at the beach, I found lots of places with coastal erosion. In this picture, you can see where rocks ^{falling} have changed the shape of the cliff.

Fun Beach Finds

I found a. castles on the beach
and Luke found a shell that the
can grow as a beard. And I also found
a cool looking rock. Looking rock.

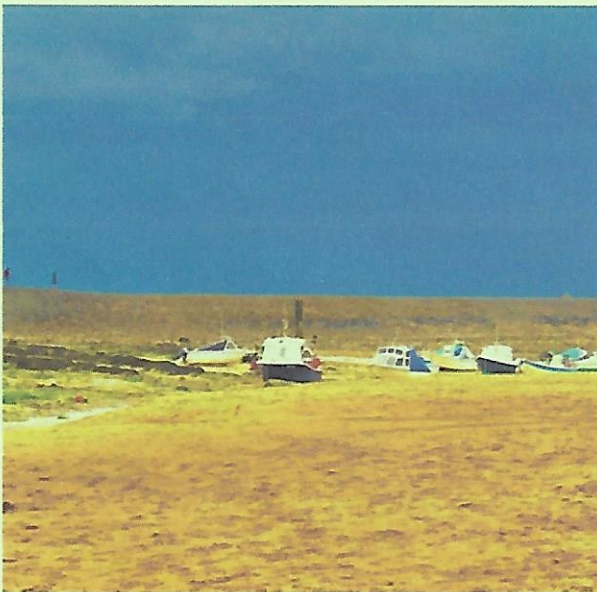

Litter Survey

Litter Type	Tally	Total
Sizing net.		14
Coaster		1
Cartons		2
Plastic bags		4
Crisp Packet		1

We found lots of ~~litter~~ ~~trash~~ ~~in~~ litter on the beach which is bad so no more.

Photography

We took a photo of the beach and when we got home we used a photo app to make the same photo to look completely different.
